BY MINDCLICK

Carbon Reduction & Environmental Impact Performance

2 of 2 facilities are tracking their carbon footprint.

Ecore's Vinyl + Composition Rubber and Calendared Rubber + Composition Rubber packaging is made up of 9% post-consumer cardboard/paper material and 29% bio-based cardboard. Composition Rubber is 32% pre-consumer paper/cardboard/wood and 9% post-consumer cardboard.

Ecore's Redeux Reclamation Program is incredibly unique as their products are already made from recycled materials at their inception and then can be "re-recycled" over and over.
